

SoNSo Website Revamp Brief

Oct 2, 2026 · @Sampath

Objective

Rebuild sonso.co.in from scratch so that a first-time visitor understands within 10 seconds what SoNSo does, which of four services fits their problem, and how to start.

This is a complete changeover, not a cleanup. Nothing from the current site is carried forward: no Sono chatbot or AI advisor, no "thinking partner" positioning, no Skills (Launch, Operations, Growth, Brainstorm), no SME framing or market-size statistics, no consulting funnel and no comparison tables. New positioning, structure, copy and visual identity.

The site must answer five questions, in this order:

1. What does SoNSo do?
2. What problems does it solve?
3. Which service is relevant to me?
4. Can they actually deliver? (proof)
5. How do I get started?

Positioning

SoNSo is a **Business Technology & Growth Partner**: one team that builds, automates, grows and measures a business, with all four parts connected.

Core description (use everywhere): We build your website, automate your operations, run your advertising and turn your data into dashboards, as one connected system rather than four separate vendors.

The differentiator: connected, not just broad. Many agencies offer websites, ads and dashboards. Few connect them. SoNSo's claim is that the pieces talk to each other:

- An ad click lands on a page SoNSo built.
- The lead flows straight into a CRM SoNSo set up.
- Follow-up happens automatically.
- Management sees cost per lead through to closed revenue on one dashboard.

That end-to-end traceability is what a business can't get from a web developer, an ad agency and a BI freelancer working separately. Every page should reinforce it.

Hero line options

Option	Headline	Note
A (chosen)	Build. Automate. Grow. Measure.	Names the framework and the services in four words
B	Websites, automation, ads and dashboards. One connected team.	Most literal; strongest for search and first-timers
C	Fewer manual tasks. More customers. Clearer numbers.	Outcome-led; services named underneath
D	Technology that helps your business grow.	Safe but generic; use as a supporting line, not the H1

SoNSo is not a generic IT services company, a web development shop, a social media agency or a software product company. It should read as a premium, outcome-focused partner to growing businesses.

Audience

The site speaks to founders, business owners and management teams of growing businesses that have outgrown informal ways of working. Copy is written for a smart, non-technical reader.

Markets: India, the US and international clients carry equal weight. No page should read as India-only. Mix examples and case studies from both markets. Avoid lakh, crore or INR-only prices, and avoid local references a US reader wouldn't follow.

We identify the buyer by the problem they feel, not by company size:

- "Our website doesn't bring in enquiries" or "we don't have a proper website yet"
- "We're doing too much by hand: spreadsheets, copy-paste, chasing follow-ups"
- "Our tools don't talk to each other"
- "We need more leads or sales, and our ads aren't working"
- "We don't really know our numbers until month-end, if then"

Secondary readers are marketing heads, operations heads and finance or MIS teams who evaluate a specific service and then take it to the decision maker.

Services

Four services, always shown in this order and always tagged with their one-word stage. Each service is presented as 4 grouped offers, not a long list of bullets. The detailed capabilities sit lower on each service page.

Stage	Service	Headline	Core offers	Typical engagement
BUILD	Websites & Digital Solutions	Build your digital presence	Business and corporate websites · Landing pages and e-commerce · Web apps and customer portals · Care plans (hosting, maintenance, speed, SEO setup)	Fixed-scope project, optional monthly care plan
AUTOMATE	Business Automation & Technology	Make your business work smarter	CRM setup and customisation · Sales, marketing and WhatsApp automation · System and API integrations · AI-powered workflows and tech audits	Audit, then project, then support retainer

Stage	Service	Headline	Core offers	Typical engagement
GROW	Performance Marketing	Turn digital platforms into growth channels	Meta, Google, YouTube and LinkedIn campaigns · Lead generation and e-commerce campaigns · Tracking, attribution and conversion setup · Landing page and funnel optimisation	Monthly retainer plus client-paid ad spend
MEASURE	Data & Business Intelligence	Turn your business data into better decisions	Management and KPI dashboards · Automated MIS and reporting · Data integration across systems · Forecasting and performance analysis	Dashboard project, optional monthly reporting

Positioning note for GROW: lead with what a pure ad agency rarely offers: clean tracking, leads delivered into the CRM, and reporting on lead quality and revenue, not just clicks. This ties the vertical to the other three instead of making it look bolted on.

The connected model

Build, Automate, Grow and Measure form a loop, not a sequence. A client can start at any stage; each stage feeds the next, and Measure shows what to improve next.

Four services form one loop: start wherever it hurts

the connected model · four stages in one loop

Show this as one simple graphic: on the homepage (section 4), on the Services page, and as a small "you are here" marker on each service page. It is a navigation aid, never another set of concepts to learn.

Sitemap and navigation

Main navigation has five items plus one button: **Services** · **Work** · **About** · **Insights** · **Contact**, and a **Book a call** button on the right. Every nav label is a plain word the visitor already understands.

- Home
- Services (dropdown shows the four stages with one-line descriptions)
 - Build: Websites & Digital Solutions
 - Automate: Business Automation & Technology
 - Grow: Performance Marketing
 - Measure: Data & Business Intelligence
- Work (case studies index, plus one page per case study)
- About
- Insights (articles, filterable by Build, Automate, Grow, Measure)
- Contact
- Legal: Privacy policy, Terms

The footer repeats the four services, adds email, phone or WhatsApp, office location and social links. No separate "How we help" page; it would duplicate Services.

Homepage structure

Nine sections, each with one job. The services appear in the first scroll and proof comes before any request to get in touch.

#	Section	Content direction	Job
1	Hero	H1: <i>Build. Automate. Grow. Measure.</i> Subline: "We build your website, automate your operations, run your advertising and turn your data into dashboards, as one connected system." CTAs: Book a call (primary), See what we do (secondary). Visual: a real dashboard or product screenshot, not stock or AI imagery.	Say what SoNSo does in under 10 seconds
2	Four services	Four cards: stage word, service name, one-line promise, link to the service page.	Let the visitor find their service
3	Start where it hurts	A simple problem picker: "Our website doesn't bring enquiries" goes to Build; "Too much manual work" goes to Automate; "We need more customers" goes to Grow; "We don't know our numbers" goes to Measure. Plain links, no chatbot.	Route visitors who think in problems, not services

#	Section	Content direction	Job
4	Connected by design	Headline: "Most businesses hire four vendors who never talk to each other." Show one lead's journey: ad → landing page → CRM → automated follow-up → dashboard.	Make the differentiator visible
5	Proof	Three case snapshots: Shehr Festival, Go Big Hospitality and Marshal, each with the problem, the stages involved and one hard number. Client logo strip beneath.	Earn trust before asking for contact
6	How we work	Four steps: Discovery call → Audit and plan → Build and launch → Run and improve.	Lower the perceived risk of starting
7	Why SoNSo	Three points: one connected team; outcomes measured, not just delivered; senior people on every project.	Answer "why you and not an agency"
8	Insights	Three latest articles, tagged by stage.	Show expertise, support SEO
9	Final CTA	"Tell us what's slowing your business down." Book a free consultation , plus WhatsApp and email.	Convert

Service page template

All four service pages use the same ten blocks in the same order, so a visitor who reads one can scan the others.

1. **Hero:** stage word, outcome headline, one-sentence promise, primary CTA specific to the service.
2. **Problems we solve:** three pain points written in the customer's words.

3. **What we provide:** the four grouped offers as cards, each with 3–5 capabilities underneath.
4. **How it works:** 4–5 steps from first call to handover or ongoing support.
5. **Who it's for:** the types of business and the signals that mean this service fits.
6. **Case study:** one featured project with numbers, linking to the full story on Work.
7. **Outcomes:** what changes for the business, such as hours saved, cost per lead or reporting time.
8. **Connected with:** how this service links to the other three stages, with links.
9. **FAQs:** 5–6 questions on timelines, pricing approach, tools and ownership.
10. **CTA:** a service-specific offer (see CTA strategy).

Supporting pages

Page	Purpose	Must include
Work	Prove delivery	Index filterable by stage. Each case study covers client and industry, the problem, what SoNSo did (tagged by stage), results with numbers, a client quote and screenshots.
About	Show the people behind the work	Why SoNSo exists (short), the three people who lead SoNSo, each with a photo, short bio and the stages they lead, then the story of how they formed the team, then a partner network section for the companies and specialists SoNSo works with, how we work, where we are based.
Insights	Build expertise and search traffic	Articles grouped under Build, Automate, Grow and Measure. Each ends with a CTA to the matching service.
Contact	Make starting easy	Short form: name, company, "What do you need help with?" (tick one or more of the four stages), optional budget range, message. Calendar booking link, WhatsApp, email, phone.

Proof and trust

Proof is the biggest gap to close: a premium positioning with no evidence reads as a claim, not a fact. The minimum set before launch:

Case studies on hand. SoNSo already has three case studies that together cover all four stages. All three clients have agreed to be named; they launch with the result types below, and real numbers are added through the CMS as they come in.

Case study	Client	Stages	What SoNSo delivered	Headline result (editable in CMS)
Shehr Festival	Heritage, art and culture walk festival	Build · Automate · Grow	Booking website with payment integration. Automated attendee journey on WhatsApp and email, from booking until the walk or event is complete, plus feedback collection afterwards. Performance marketing for ticket sales.	Bookings or ticket revenue driven; cost per booking

Case study	Client	Stages	What SoNSo delivered	Headline result (editable in CMS)
Go Big Hospitality	Hospitality and franchise brand	Automate · Grow · Measure	Ads feeding a lead flow into the CRM, with WhatsApp and email automation. Calling integration with AI call summaries via APIs, AI-powered workflows and a tech audit. Management and KPI dashboards, reporting, data integration across systems, forecasting and performance analysis.	Lead response time; cost per qualified lead; reporting time saved
Marshal	Single-product manufacturer (inverter trolleys) selling offline by telecalling to distributors, wholesalers and retailers; no website	Automate · Measure	Custom internal CRM with sales flow and automation, system integrations, management and KPI dashboards, automated MIS and reporting, data integration, forecasting and performance analysis, all aimed at sales revenue targets.	Revenue growth; calls or orders per rep; MIS time saved

Together they make the connected claim credible. Shehr Festival shows Build to Grow end to end, Go Big Hospitality shows the full lead-to-dashboard chain, and Marshal proves SoNSo serves offline sales businesses, not just ones that need websites or ads.

- ☐ Headline results for the three case studies, added through the CMS after launch
- ☐ 6–10 client logos, used with permission
- ☐ 2–3 named client testimonials with role and company
- ☐ Real team photos and names on About
- ☐ Screenshots of real work: dashboards (data masked), websites, campaign results
- ☐ Platform badges (Meta, Google, Microsoft Power BI, CRM partners) only where a certification or partnership actually exists

Use only numbers SoNSo can stand behind. If a client can't be named, describe them by industry and city ("a multi-outlet restaurant brand in Hyderabad") rather than inventing detail.

CTA strategy

One primary action site-wide, **Book a call** (a free 30-minute consultation), with one secondary CTA and one service-specific offer per page. A visitor should never see two competing primary buttons.

Where	Primary CTA	Secondary CTA
Header (all pages)	Book a call	—
Home	Book a call	See what we do
Build page	Get a website quote	See website work
Automate page	Book an automation audit	See automation work
Grow page	Get a free ads account review	See campaign results
Measure page	See a sample dashboard	Book a call
Case study pages	Get similar results	See more work
Insights articles	The matching service CTA	Subscribe or read more

WhatsApp sits as a quiet floating button on mobile only, not as a competing headline CTA.

Messaging and tone

Clear, confident and specific: write like a senior consultant explaining things to a busy owner, not like an agency pitching. Short sentences, second person ("your business"), numbers over adjectives.

Instead of	Write
End-to-end digital solutions	We build, automate, grow and measure your business
Leveraging cutting-edge AI	Automated follow-ups that run without your team
360° growth strategy	More qualified leads, tracked to revenue
Seamless integration	Your CRM, website and WhatsApp share the same data
Data-driven insights	See yesterday's sales by 9 a.m., not at month-end

Rules:

- Every headline states an outcome or a problem, never a capability on its own.
- Always use the same four stage words: Build, Automate, Grow, Measure. Don't introduce new frameworks or sub-brands.
- Banned: synergy, cutting-edge, revolutionary, one-stop shop, 360°, game-changer, thinking partner, and AI as decoration.
- Body paragraphs max 3 sentences; no walls of text.

Visual direction

The look should say "premium B2B consultancy": calm, spacious and confident, closer to a modern SaaS or advisory firm than to an agency portfolio. The current green theme and look are retired with everything else.

- **Palette:** one dark neutral base, generous white space, and a single brand accent. Each stage may get a subtle secondary tint, used only for stage labels and icons, so Build, Automate, Grow and Measure are recognisable across the site.
- **Typography:** one clean sans-serif family, large confident headlines, short line lengths.

- **Imagery:** real work only, including dashboards, websites, CRM flows and campaign results, presented in clean device frames. No stock handshake photos, no robots, no glowing "AI brain" graphics.
- **Signature element:** the four-stage loop (see The connected model) as a simple recurring graphic, also used as section dividers and service icons.
- **Motion:** minimal. Subtle reveals on scroll, nothing that delays reading.
- **Logo:** direction 2, the typographic So-N-So wordmark, is chosen. Directions 1 and 3 and the current wordmark stay as options to revisit at any point.

Direction 2 chosen; 1 and 3 kept as options

logo refresh directions · 3 sketches

Direction 2 will be developed into final artwork. Directions 1 and 3 remain here as alternatives.

Technical, SEO and launch

The site should demonstrate what SoNSo sells: fast, fully tracked, and wired into a CRM and a dashboard from day one.

- **Retire the old site cleanly:** shut down the Sono advisor subdomain (advisor.sonso.co.in) and 301-redirect it, the old service URLs and any removed pages to the closest new page. No dead links.
- **Existing blog:** keep any posts that bring traffic, rewritten in the new voice and moved under Insights; redirect the rest.
- **New SEO base:** fresh page titles and meta descriptions per page, one target topic per service page (e.g. "CRM automation", "Power BI dashboards"), schema markup for organisation, services and articles.

- **Tracking:** GA4, Meta Pixel with Conversions API, Google Ads conversions, call and WhatsApp click tracking. Form submissions go straight into a CRM with source attribution.
- **Show it off:** a live dashboard of the site's own leads becomes a case study for the Measure page.
- **Performance:** mobile-first, under 2.5 s LCP on 4G, accessible contrast and keyboard navigation.
- **Platform:** custom build, paired with a lightweight headless CMS so the team can edit copy and add case studies and articles without a developer. As a SoNSo build, the site itself also becomes a Build portfolio piece.
- **International readiness:** region-neutral English, a booking calendar that shows slots in the visitor's own time zone, and contact options that work outside India (email and international phone, not WhatsApp alone).

Decisions to confirm

These choices shape the copy and design; settle them before writing starts.

- ☐ **Markets:** India only, or India plus international (US/Europe)? Decided: India, the US and other international markets get equal weight (see Audience).
- ☐ **Hero line:** decided, option A: Build. Automate. Grow. Measure.
- ☐ **Entry offer:** decided, a free 30-minute consultation behind every "Book a call" button.
- ☐ **Pricing:** decided, no prices on the site; pricing is discussed on the call.
- ☐ **Case studies:** decided, Shehr Festival, Go Big Hospitality and Marshal, all agreed to be named. Launch with the result types in Proof; real numbers are added later through the CMS.
- ☐ **Logo:** decided, direction 2 (typographic So-N-So). Directions 1 and 3 and the current wordmark stay in Visual direction as alternatives.
- ☐ **Team:** decided, three leads: Gattu Mani Sampath (Build, Automate, Measure), Nikhil Gupta (Grow), Akhil Gupta (Build, Automate). Bios, photos and how they came together as a team still to come; partners shown separately.
- ☐ **Platform:** decided, custom build.
